

# META COMPACT Office Shelving system

Ensure good order in the office.

The storage system

The new back stop for META COMPACT Office Shelves.

Newly improved load capacities of the META COMPACT Office Shelves.

The new central back stop for double entry META COMPACT Office Shelves.

## META COMPACT

### Bolted shelving

The low-cost solution for office shelving. Bolted shelving is the classic form of shelving for the office and is particularly useful for those office areas requiring a robust solution e.g. workshop based office areas.

It is a simple and easy to erect system and the slotted angle uprights offer high strength and are attractively finished in scratch-resistant powder coated paint in light grey giving a long service life for the shelving. Naturally the range of accessories will also integrate with this bolted version of META COMPACT.

All at attractively competitive prices.

All META COMPACT Office Racks have steel feet to accept ground fixings.

## META COMPACT

### Boltless shelving

This system can be rapidly and easily assembled without tools in the office environment by any worker even without experience in the assembly of shelving.

It simply clicks together to form really tough but attractive shelving for the modern office. META COMPACT can be easily delivered to non-ground floor locations and assembled on site with the minimum of space requirements, often much easier than a cupboard or filing cabinet.

# META COMPACT Office Shelving system

Ensure good order in the office.

## META COMPACT
